P.T.O.

EDWARD STANFORD, COCKSPUR STREET, CHARING CROSS.

PRICE 3D.

On the days bracketed together the rain has been allowed to collect in the guage, absence from home having prevented the daily registering.

The rain for August 30 may perhaps be a little, too low, a branch from a neighbouring bush having become detached from its fastening was blown in such a direction as possibly to intercept the rain to the guage. This was unfortunate as from communications to the local papers the rain on that occasion was very unevenly distributed, the heaviest fall being a few miles S.W. of Bristol. The deficiency cannot however be much not exceeding $\frac{1}{4}$ inch.

Comparison with neighbouring records does not indicate any deficiency on Aug 30th

IMPORTANT NOTE.—Rain should be measured daily at 9 a.m., and the result entered to the previous day. If an Observer prefers not to conform to this almost universal rule, he is earnestly requested to add the reading at 9 a.m. on 1st January of the following year in the space provided for it at the end of this paragraph. Full instructions for the measurement of rain, the selection and placing of rain gauges, and particulars as to the British Rainfall Organization are given in "*Rules for Rainfall Observers*," sent post-free on application to Dr. H. R. Mill, 62, Camden Square, London, N.W.

RAINFALL CHART

BY

NEGRETTI AND ZAMBRA,

Somerset

METEOROLOGICAL INSTRUMENT MAKERS TO HER MAJESTY,
HOLBORN VIADUCT, E.C.; 45, CORNHILL, E.C.; 122, REGENT STREET, W.; & CRYSTAL PALACE, S.E.

Kept by W. Battersby
At Knowle, Dunster
Time 9 A.M.
Date 1st January 1893

DIRECTIONS.

Top of gauge 12 inches above the ground in open space. Readings to be taken in the morning and recorded for previous day. Melted snow equals one-twelfth its average depth—thus, 12 inches snow=1·0 rain

METEOROLOGICAL INSTRUMENT MAKERS TO HER MAJESTY,

HOLBORN VIADUCT, E.C.; 45, CORNHILL, E.C.; 122, REGENT STREET, W.; & CRYSTAL PALACE, S.E.

Kept by Wansey Battersby

At Knowle, Dunster Somerset

Time 9 A.M.

Date 1 January 1894.

DIRECTIONS.

Top of gauge 12 inches above the ground in open space. Readings to be taken in the morning and recorded for previous day. Melted snow equals one-twelfth its average depth—thus, 12 inches snow=1·0 rain

Date.	Jan.	Feb.	March.	April.	May.	June	July.	Aug.	Sept.	Oct.	Nov.	Dec.

REGISTER OF RAINFALL IN 1892

Kept at Halse *in the County of* Somerset *by* R C A Prior

Latitude 51.3 N

Longitude 3.16 W

Time of Observation 8

Height of Receiver of Rain Gauge. Above Ground 18 i

Height of Receiver of Rain Gauge. Above Sea Level 227 f

Condensed Instructions.—Fix the gauge firmly, with its orifice level and 1 ft. above the ground, quite clear of trees and walls, empty it daily at 9 a.m., and enter it against the preceding day. Snow should be melted slowly in a closed vessel and the amount entered as rain, an "S" being prefixed. With a low temperature and high wind, it is sometimes blown out of the funnel; then take one-twelfth of the average depth of snow and enter that as the yield of water—*e.g.*, 3 inches snow = ·25 of rain. When there is no rain, a line should be drawn, rather than cyphers inserted.

Total from Jan. 1.								13.58					

Accurate observers of rainfall will oblige by sending a copy of their record to Mr. G. J. Symons, of 62, Camden Square, London, N.W., for insertion in his annual tables of *British Rainfall*, which now contain returns from more than 1500 stations.

Additional Copies of this form (price 3d. each) can be obtained of the above, from Mr. Stanford, 55, *Charing Cross, and from all the leading opticians.*

EDWARD STANFORD, COCKSPUR STREET, CHARING CROSS.

PRICE 3D.

The amount of snow measured on March 9th & 10th. I estimated at .58. Owing to the drifting nature of the fall I was unable to record the amount falling on each day separately. — I think it probable that the actual amount may have been somewhat in excess of the amount recorded.

W. F. Rose
